Diagnosis of Issues / Damage :

After inspection on the phone we can determine the mainboard has suffered a serious fault due the impact damage, forcing the phone to restart every two to three minutes.

While on power, used mainboard readings which give us unstable power readings and voltage going to 0.00 when phone restarts.

Repair and or Replacement recommendations:

REPLACEMENT RECOMMENDED:

Based on the extent of the damage which affects not only the back glass but also the mainboard, this iPhone is considered **Beyond Economical Repair.**

Any repair attempt would be unlikely to restore the device to the reliability or performance standards expected under manufacturer specifications.
